# CLEAN HIGH PURITY LITHIUM

**OTC Virtual Conference** 

Steve Promnitz - Managing Director 6 August 2020

LAKE

RESOURCES

CLEANER LITHIUM

EMELECTRIC WORLD

ASX:LKE FRA:LK1 OTC:LLKKF

#### **Disclaimer**

#### **General Statement and Cautionary Statement**

This presentation has been prepared by Lake Resources N.L (Lake) for information purposes and meetings with sophisticated and professional investors, institutional investors and brokers and not any particular party. The information in this presentation is based upon public information and internally developed data and reflects prevailing conditions and views as of this date, all of which are accordingly subject to change. The information contained in this presentation is of general nature and is not intended to address the circumstances of any particular individual or entity. There is no guarantee that the information is accurate as of the date it is received or that it will continue to be accurate in the future. No warranties or representations can be made as to the origin, validity, accuracy, completeness, currency or reliability of the information. No one should act upon such information without appropriate professional advice after a thorough examination of the particular situation. Lake Resources NL accepts no responsibility or liability to any party in connection with this information or views and Lake disclaims and excludes all liability (to the extent permitted by law) for losses, claims, damages, demands, costs and expenses of whatever nature arising in any way out of or in connection with the information, its accuracy, completeness or by reason of reliance by any person on any of it. The information regarding projects described in this presentation are based on exploration targets, apart from Kachi project's resource statement. The potential quantity and grade of an exploration target is conceptual in nature, with insufficient exploration to determine a mineral resource and there is no certainty that further exploration work will result in the determination of mineral resources or that potentially economic quantities of lithium will be discovered. Some leases are located within and around the Orocobre, Orocobre/Advantage Lithium and Ganfeng/Lithium Americas projects and although data is limited within the properties, the leases may cover potential extensions to the Cauchari/Olaroz projects with potential extensions to aquifers, although this provides no assurance that any resource will be identified on the Lake leases. The lithium pegmatite leases occur adjacent to past producers of spodumene but no potential extension to any mineralisation can be assured.

#### **Forward Looking Statements**

Certain statements contained in this presentation, including information as to the future financial performance of the projects, are forward-looking statements. Such forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Lake Resources N.L. are inherently subject to significant technical, business, economic, competitive, political and social uncertainties and contingencies: involve known and unknown risks and uncertainties and other factors that could cause actual events or results to differ materially from estimated or anticipated events or results, expressed or implied, reflected in such forward-looking statements; and may include, among other things, statements regarding targets, estimates and assumptions in respect of production and prices, operating costs and results, capital expenditures, reserves and resources and anticipated flow rates, and are or may be based on assumptions and estimates related to future technical, economic, market, political, social and other conditions and affected by the risk of further changes in government regulations, policies or legislation and that further funding may be required, but unavailable, for the ongoing development of Lake's projects. Lake Resources N.L. disclaims any intent or obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise. The words "believe", "expect", "anticipate", "indicate", "contemplate", "target", "plan", "intends", "continue", "budget", "estimate", "may", "will", "schedule" and similar expressions identify forward-looking statements. All forward-looking statements made in this presentation are qualified by the foregoing cautionary statements. Investors are cautioned that forward-looking statements are not guarantees of future performance and accordingly investors are cautioned not to put undue reliance on forward-looking statements due to the inherent uncertainty therein. Lake does not undertake to update any forwardlooking information, except in accordance with applicable securities laws.

#### **Competent Person Statement**

The information contained in this presentation relating to Exploration Results, Mineral Resource estimates and the associated Indicated Resource , which underpins the production target in the pre-feasibility study, have been compiled by Mr Andrew Fulton. Mr Fulton is a Hydrogeologist and a Member of the Australian Institute of Geoscientists and the Association of Hydrogeologists. Mr Fulton has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a competent person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Andrew Fulton is an employee of Groundwater Exploration Services Pty Ltd and an independent consultant to Lake Resources NL. Mr Fulton consents to the inclusion in this presentation of this information in the form and context in which it appears. The information in this presentation is an accurate representation of the available data to date from initial exploration at the Kachi project and initial exploration at the Cauchari project.

## **Clean Technology – High Purity Lithium.**

- Clean Technology Simple adaptation of well-known water treatment method
- **Disruptive Direct Extraction with Lilac Solutions** Innovative, efficient lithium separation from salty water (brine); cost competitive vs traditional process
- High Purity Lithium 99.9% purity battery grade lithium carbonate Rising demand;
   ~20% compound growth for lithium; only 50-60% of production is battery grade
- Responsibly Sourced; Sustainable Small environmental footprint; Returns 99% brine to source; Lilac backed by Bill Gates-led Breakthrough fund; MIT's The Engine
- Path to Commercialisation Pilot plant module proven scale-up from lab testing

# **Direct extraction – Clean Technology**

Disruptive – No Evaporation or Mining

New adaptation to known technology in water treatment

Efficient - lithium removed from brine; no evaporation

- Faster, with higher recoveries
- High Purity products In demand
- Cost Competitive and scalable
- Environmentally friendly Returns brine to source; no change to chemistry

# Sustainable Lithium. Responsibly Sourced

Solution for more sustainable lithium in EV's

- Electric Vehicle Makers, EU, Seek More Sustainable Lithium Volkswagen, Daimler, EU push for more responsible sourcing of battery materials (Reuters)
- Direct Extraction is not mining and avoids water politics Known water treatment process (since 1940's) drastically cuts water use (Bloomberg)
- Lilac is backed by known high profile investors Lilac supported by Bill Gates-led Breakthrough fund, MIT's The Engine Fund
- Pilot plant modules demonstrate process works and is scalable Pilot plant modules in California processing Kachi brines

#### Sustainable Lithium.

**ESG Targets for the Future – EU, UN** 

EU

**ADAPTATION** 

**CLIMATE CHANGE** 

SUSTAINABLE AND

PROTECTION OF WATER AND MARINE RESOURCES

UN

#### UNGP

**United Nations Guiding Principles** on Business and Human Rights

#### SDGs

Sustainable Development Goals

**ASX:LKE** OTC:LLKKF

#### Direct extraction. **Ion Exchange Process Lilac Solutions**

**Disruptive Technology** (3 hrs to 30-60,000ppm vs 1-2 years) Saves time and money - Faster production. Recoveries doubled **Lower impurities** – Higher purity as only lithium is extracted. **Sustainable solution** – Brine reinjected; no change to chemistry 3 HOURS To produce **Concentrate** vs 12-24 mths ION 30-60,000 PPM **EXCHANGE** LI CONCENTRATE TANK LITHIUM CARBONATE PLANT **BRINE RETURNED** AND/OR LITHIUM HYDROXIDE PLANT WITHOUT CHANGES **EXCEPT LITHIUM REMOVAL BRINE RESOURCE** 

# **Direct extraction – Small Environmental Footprint**

Lilac Direct Extraction Footprint vs Brine Evaporation Ponds (Atacama) and Hard Rock Mining (Greenbushes)

ASX:LKE OTC:LLKKF

Prime Location – Next to Large Producers.

Lithium Triangle: 40% of world's lithium production at the lowest cost.

5 largest producers all have operations ALB, SQM, LTHM + Tianqui, Ganfeng

Lake has a large project at Kachi 3 other brine projects

## Kachi Project.

100% Lake owned

Major brine resource - Top10

4.4 Mt LCE Total Resource

(1Mt LCE Indicated Resource; 3.4 Mt Inferred)

PFS only uses 20% of resource Open at depth and laterally

70,000 hectares of leases (11x Size of Manhattan Island)

It's Not About Grade -

In industrial chemistry, 'low impurities' is king

# Kachi PFS - High Margin Pre-Feasibility Results

• Long Life, High Value Project - 25 year production 25,500 tpa LCE\*\*; US\$1050 million project value\* (NPV @ 8% discount rate, Pre-tax)

- High Margin Lithium Production –
- 55% Operating Margin; US\$465 million EBITDA in 1st 3 years\*
- **High Purity** 99.9% purity battery grade Li<sub>2</sub>CO<sub>3</sub>
- Cost Competitive among Brine Producers –
   Operating cost US\$4170/t Li2CO3
- Prime Location Large scalable project in world-class region

## **Cost Competitive Direct Extraction Consistent High Value Low Impurity Product**

<b>Chemical Component</b>	Actual (wt%)	Target
Lithium (Li)	99.9	99.5 Min
Sodium (Na)	0.024	0.025 Max
Magnesium (Mg)	<0.001	0.008 Max
Calcium (Ca)	0.0046	0.005 Max
Iron (Fe)	<0.001	0.001 Max
Silicon (Si)	<0.001	0.003 Max
Boron (B)	<0.001	0.005 Max

ASX:LKE

# Sector Growth in Battery Megafactories; But Limited New Supply

From 3 to 136 Megafactories in 5 years – Fastest growth last month – Yet underinvestment in supply of batt materials

ASX:LKE OTC:LLKKF

#### **Production Timeline.**

H1 - 2020

High purity samples

Kachi direct extraction pilot plant module – operating

Kachi PFS (Apr 2020) – Robust economics; cost competitive H2 - 2020, H1 - 2021

Kachi samples to battery makers for qualification purposes

Kachi – finalise offtake and strategic partner discussions

Kachi – Initiate DFS, EISA, pilot plant to site Complete DFS, approvals; construction finance

#### 2016-19

Large Lease Area Pegged in 2016

Kachi – Large new discovery; major resource

Kachi – PFS commenced; Pilot plant initiated

Direct Extraction method – Testing

Cauchari – extended high grades; discovery

#### 2022-2023

Kachi – Production

Kachi – 25,500tpa LCE; Capex US\$540m

Phased expansion from 10,000tpa LCE

Capex Reduced

Olaroz, Cauchari – Drill, Resource, PFS

ASX:LKE OTC:LLKKF

#### LAKE RESOURCES (ASX:LKE, OTC:LLKKF)

Total Current Shares on Issue	671,461,957
Listed Options (10c) Jun 2021 Expiry Unlisted Options (4.6c) Oct 2022 Expiry Unlisted Options (8c) Feb 2022 Expiry Unlisted Options (9c) Jul 2021 Expiry	52,512,693 18,300,000 5,555,000 15,000,000

#### **Market Data**

Market Cap (\$A)	@ \$0.037/ sh (15 day VWAP, 4 August)	A \$25 million US\$19 million
Cash (\$A)	30 June 2020	\$0.1 million + \$0.46 million in July
Unsecured debt		\$ 0.2m
Share Price	52 week range	\$0.023 - 0.10/sh
Share Register	40% Top 30, High Net Worth Investors	

# Orior Capital – Lake 'Incredibly Undervalued'

- Lake Undervalued vs Peers Robust financial metrics, advantages of direct extraction & lithium outlook: , Lake trading <2% NPV vs peers trading at around 20%; valuation of 29c per share
- Compelling, Cash-Generative Project Kachi to generate EBITDA US\$155m pa and EBITDA margin 55%, based on conservative lithium carbonate price of US\$11,000/t
- Significant and Sustainable Competitive Advantages Energy storage sector is increasingly demanding low impurities and product consistency
- It's Not About Grade In industrial chemistry, 'low impurities' is king and Kachi delivers
- **Supply-Side Constraints** Lithium demand rising as EV revolution continues, yet projects suffering cutbacks or delays; evaporation pond projects coming under environmental scrutiny

#### Significant Upside

Lake \$25m vs Peers \$50-120m market cap

Trading at <2%NPV<sub>8</sub> vs Peers 10-15% NPV<sub>8</sub> at same stage

Research: LKE website

#### Experienced.

# Lake has extensive development experience – both at the board level and local management

Extensive project management experience in South America – geologist and finance experience – with major companies (Rio, Citi) and mid-tiers.

Stu Crow
CHAIRMAN NON-EXEC

More than 25 years of experience (numerous public companies) and in financial services

Nick Lindsay
NON-EXEC DIRECTOR

30 years of experience in Argentina/Chile/Peru (PhD in Metallurgy & Materials Engineering); Major companies (Anglo) and taken companies from inception to development to acquisition in South America

Robert Trzebski NON-EXEC DIRECTOR

International mining executive; 30 years experience; operational, commercial and technical experience in global mining incl. Argentina. Extensive global contacts to assist Lake with project development. Chief Operating Officer of Austmine Ltd. Director Austral Gold.

## **Clean High Purity Lithium - Unique Proposition.**

- New Clean Technology for High Purity Lithium Growing need
- Responsibly Sourced & Sustainable Growing demand from EV makers, EU guidelines, Battery makers Enables a clean future and one of only new suppliers
- 21st Century Solution to Batteries for EV's
