Disclaimer

General Statement and Cautionary Statement

This presentation has been prepared by Lake Resources N.L. (Lake) for information purposes and meetings with sophisticated and professional investors, institutional investors and brokers and not any particular party. The information in this presentation is based upon public information and internally developed data and reflects prevailing conditions and views as of this date, all of which are accordingly subject to change. The information contained in this presentation is of general nature and is not intended to address the circumstances of any particular individual or entity. There is no guarantee that the information is accurate as of the date it is received or that it will continue to be accurate in the future. No warranties or representations can be made as to the origin, validity, accuracy, completeness, currency or reliability of the information. No one should act upon such information without appropriate professional advice after a thorough examination of the particular situation. Lake Resources N.L accepts no responsibility or liability to any party in connection with this information or views and Lake disclaims and excludes all liability (to the extent permitted by law) for losses, claims, damages, demands, costs and expenses of whatever nature arising in any way out of or in connection with the information, its accuracy, completeness or by reason of reliance by any person on any of it. The information regarding projects described in this presentation are based on exploration targets, apart from Kachi project’s resource statement. The potential quantity and grade of an exploration target is conceptual in nature, with insufficient exploration to determine a mineral resource and there is no certainty that further exploration work will result in the determination of a mineral resource or that potentially economic quantities of lithium will be discovered. Some leases are located within and around the Grosvener, Orocobre/Advantage Lithium and Ganfeng/Lithium Americas projects and although data is limited within the properties, the leases may cover potential extensions to the Cauchari/Olaroz projects with potential extensions to aquifers, although this provides no assurance that any resource will be identified on the Lake leases. The lithium pegmatite leases occur adjacent to past producers of spodumene but no potential extension to any mineralisation can be assured.

Forward Looking Statements

Certain statements contained in this presentation, including information as to the future financial performance of the projects, are forward-looking statements. Such forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Lake Resources N.L. are inherently subject to significant technical, business, economic, competitive, political and social uncertainties and contingencies; involve known and unknown risks and uncertainties and other factors that could cause actual events or results to differ materially from estimated or anticipated events or results, expressed or implied, reflected in such forward-looking statements; and may include, among other things, statements regarding targets, estimates and assumptions in respect of production and prices, operating costs and results, capital expenditures, reserves and resources and anticipated flow rates, and are or may be based on assumptions and estimates related to future technical, economic, market, political, social and other conditions and affected by the risk of further changes in government regulations, policies or legislation and that further funding may be required, but unavailable, for the ongoing development of Lake’s projects. Lake Resources N.L. disclaims any intent or obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise. The words “believe”, “expect”, “anticipate”, “indicate”, “contemplate”, “target”, “plan”, “intends”, “continue”, “budget”, “estimate”, “may”, “will”, “schedule” and similar expressions identify forward-looking statements, whether as a result of new information, future events or results or otherwise. All forward-looking statements made in this presentation are qualified by the foregoing cautionary statements. Investors are cautioned that forward-looking statements are not guarantees of future performance and accordingly investors are cautioned not to put undue reliance on forward-looking statements due to the inherent uncertainty therein. Lake does not undertake to update any forward-looking information, except in accordance with applicable securities laws.

Competent Person Statement

The information contained in this presentation relating to Exploration Results, Mineral Resource estimates and the associated Indicated Resource, which underpin the production target in the pre-feasibility study, have been compiled by Mr Andrew Fulton. Mr Fulton is a Hydrogeologist and a Member of the Australian Institute of Geoscientists and the Association of Hydrogeologists. Mr Fulton has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a competent person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Andrew Fulton is an employee of Groundwater Exploration Services Pty Ltd and an independent consultant to Lake Resources N.L. Mr Fulton consents to the inclusion in this presentation of this information in the form and context in which it appears. The information in this presentation is an accurate representation of the available data to date from initial exploration at the Kachi project and initial exploration at the Cauchari project.
Clean Technology – No Mining – High Purity

- **Clean Technology – Direct Extraction by Partner, Lilac Solutions** – Efficient lithium separation from brine; backed by Bill Gates-led Breakthrough Energy fund

- **High Purity Lithium** - 99.97% purity battery quality lithium carbonate: Kachi Project

- **Responsibly Sourced; Sustainable; ESG** – Returns 99% brine to source

- **Demonstrated Path to Production – Kachi Project**
  Successful pilot plant module; Small scale-up to production; Cost-competitive; Large project
Solution to EV & Cathode/Battery Maker Demand

Key Demand – Consistently high purity & more sustainable

• **#1 High Purity Battery Materials** - to avoid performance issues –
  Low impurities are being sought in battery materials to ensure reliable battery performance

• **#2 Responsibly Sourced, Traceable, Sustainable Battery Materials** -
  Transition to electric vehicles increased demand for more sustainable battery materials. Smaller CO2, water, physical, energy footprint. EU market set July 2024 for CO2 footprint.

• **#3 Low Cost Structure** - To deliver affordable batteries for electric vehicles

• **Lake/Lilac Solution** – High purity/low impurity consistently; Cost Competitive; Scalable; Small environmental footprint; Returns 99% brine to source; Low water usage
Demand Growth for Sustainable Lithium Supply

18 times more Lithium Production by 2030; Underinvestment in new supply; Price moving up

Lithium Carbonate Price Increasing
Recent spot China price increase US$8,500-10,000/t

Need 18x more Lithium Production by 2030
1st time lithium added to critical raw materials list
“7 companies SQM size per year for 10 years”

Megafactory growth
181 battery factories to 2030, up 750GWh last yr but no lithium supply growth

Source: European Commission “Action Plan on Critical Raw Materials” (mid range selected); Financial Times 31 August 2020; Benchmark Mineral Intelligence Dec 2020

Source: Benchmark Mineral Intelligence Dec 2020
Direct extraction - Clean, Efficient

Re-engineered well-known technology in water treatment

• Efficient – just lithium removed from brine
• Faster – days not months or years
• Higher recoveries than evaporation
• High purity – because only lithium removed
• Cost competitive with traditional method
• Scalable, flexible to meet demand quickly
• Environmentally friendly - small footprint
• Returns brine to source; no change to chemistry; no heating of brine
Direct extraction.
Ion Exchange Process
Lilac Solutions

Replaces Evaporation Ponds with Ion Exchange Modules
Simple Process – Repeated every 2.5 hours
Simple Flowsheet to produce lithium carbonate

3 HOURS
To produce Concentrate vs 12-24 mths

BRINE RETURNED
WITHOUT CHANGES EXCEPT LITHIUM REMOVAL

LITHIUM CARBONATE PLANT
AND/OR LITHIUM HYDROXIDE PLANT

BRINE RESOURCE
De-Risked Processing; Simple Production Scale-up

Direct Extraction Lithium – Lilac Pilot Plant Module

Pilot
1-2 modules

ASX:LKE
OTC:LLKKF

Pilot to Production

Direct Extraction Lithium – Lilac Production Scale

Production Scale
50+ modules

Modules here are not an example of the actual modules
Direct extraction - Small Environmental Footprint - 90% less

Lilac Direct Extraction Footprint vs Brine Evaporation Ponds (Atacama) and Hard Rock Mining (Greenbushes)

Direct Extraction - Kachi
Returns
brine to source
High Purity

99.97% Purity Lithium Carbonate
Produced from Kachi project brines

After processing in Lilac direct extraction pilot module

- Battery Grade considered to be 99.5%
- Kachi samples have very low impurities (60x less than 99.5% battery grade)
- Simple flowsheet; cost – competitive
Low Impurities - Premium Pricing - Cost Competitive

Direct Extraction Kachi Project Positioned at lower end of cost curve

Lithium Carbonate Pricing Range

Brine – Lower Cost  Hard Rock – Higher Cost

Chemical Component | Actual (wt%) | Target
--- | --- | ---
Lithium (Li) | 99.97 | 99.5 Min
Sodium (Na) | 0.0011 | 0.025 Max
Magnesium (Mg) | <0.001 | 0.008 Max
Calcium (Ca) | <0.001 | 0.005 Max
Potassium (K) | 0.0049 | 0.005 Max
Sulphur (S) | <0.01 | 0.01 SO4 Max
Aluminium (Al) | <0.001 | 0.001 Max
Iron (Fe) | <0.001 | 0.001 Max
Silicon (Si) | <0.001 | 0.005 Max
Boron (B) | <0.001 | 0.005 Max

Source: LKE announcements 20/10/2020, 14/01/2020
Prime Location – Large Producers.

Lithium Triangle: 40% of world’s lithium production at the lowest cost.

5 largest producers all have operations ALB, SQM, LTHM + Tianqui, Ganfeng JV

Lake has a large project at Kachi
3 other brine projects
Over 220,000 hectares (550,000 acres)
Kachi Project.
100% Lake owned

Major brine resource - Top10
4.4 Mt LCE Total Resource
(1Mt LCE Indicated Resource; 3.4 Mt Inferred)
25 yrs production uses 20% resource

74,000 hectares of leases
(185,000 acres; size of NYC)

PFS 2020
DFS/ESIA 2021
Production 25,500tpa 2024
Kachi - Advantages: Large, Clean, Expandable

- **Large**: 4.4 million tonne LCE.
- **Expandable**: Open laterally; Open at depth
- **Clean**: Brine low in impurities
- **Long Life, High Value**: 25 year production 25,500 tpa LCE; US$1050 million project value
- **Cost Competitive**: Operating costs similar to evaporation ~US$4100/t
- **Scalable**: Modular processing allows easy scaling to +50,000tpa
Kachi - High Margin Pre-Feasibility Results

- **Long Life, High Value Project** - 25 year production 25,500 tpa LCE**; US$1050 million project value* (NPV @ 8% discount rate, Pre-tax)

- **High Margin Lithium Production** –
  - 55% Operating Margin; US$465 million EBITDA in 1st 3 years*

- **High Purity** - 99.9% purity battery grade Li₂CO₃

- **Cost Competitive among Brine Producers** –
  Operating cost US$4170/t Li₂CO₃

- **Project Value could more than Double** – with premium pricing

*Note: Results based on PFS Study Assumptions  * Assuming conservative US$11,000/t lithium carbonate CIF future price.  ** Based on Indicated Resource 1.0Mt @290mg/L lithium
DFS Commenced - Direct extraction

Production Plant Design with Lilac Solutions Direct Extraction Technology

Definitive Feasibility Study Commenced – Using Solar Hybrid power
Lake’s Clean Lithium into Batteries
Novonix - Process underway

Novonix - battery technology leader (ASX:NVX; OTCQX:NVNXF)
Tier 1 firms
- Panasonic, CATL, Samsung, SK, LG Chem, Bosch, Honda, Dyson
Work with Dr Jeff Dahn at Dalhousie Uni
- a ground breaking "name" in the battery tech space
Developed latest cathode & anode technology

Lake’s lithium carbonate tested quickly, transparently
Demonstrate that Lake's product is truly battery quality
Accelerates discussions downstream
Only ~35% of lithium production Tier-1 qualified as battery quality
Only 50-60% of lithium production is battery quality
Strengthens Lake’s quality and ESG benefits
Production Timeline.

Clean High Purity Lithium - Unique Proposition.

- **New Clean Technology for High Purity Lithium** – Growing need

- **Responsibly Sourced & Sustainable** - Lake uniquely positioned to satisfy demand for high quality battery material more responsibly sourced without mining. Enables a clean future

- **21st Century Solution to Batteries for EV’s** – Lake’s clean lithium being tested in latest batteries

  - H1 2024
Sustainable Lithium - In demand

Electric Vehicle Makers want more sustainable battery materials in EV’s

• **Electric Vehicle Makers, EU Seek More Sustainable Lithium** – Volkswagen, Daimler, BMW, EU want more responsible sourcing of battery materials; ESG (environmental, social, governance) central to European Union’s lithium-ion battery strategy.

• **Direct extraction is not mining and avoids water politics**

• **Lilac backed by high profile successful investors** – Lilac supported by Bill Gates-led Breakthrough fund, MIT’s The Engine Fund

• **Entire Life Cycle Important – Process reduces environmental cost**
Direct extraction - Small Environmental Footprint

Brine Evaporation smaller CO2 footprint than hard rock; Lilac Direct Extraction reduces water impact

Comparison of CO₂eq emissions, kg CO₂eq/kg product

Grey: Reference material, information from technical literature
Green: Spodumene based products
Blue: Brine products

LCE = Lithium Carbonate Equivalent
Li₂CO₃ corresponds to 1 LCE
0.88 / LiOH*H₂O corresponds to 1 LCE

Leadership.

Lake has extensive development experience. Full team in country for 5 years.

Steve Promnitz
MANAGING DIRECTOR

Extensive project management experience in South America – geologist, chemist and finance – with major companies (Rio Tinto, Citi) and mid-tiers. Developed projects previously in Argentina.

Stu Crow
CHAIRMAN NON-EXEC

More than 25 years of experience (numerous public companies) and in financial services; Keen interest in energy transition

Nick Lindsay
TECHNICAL DIRECTOR
LEADING DFS STUDY

30 years of experience in Argentina/Chile/Peru (PhD in Metallurgy & Materials Engineering); Major companies (Anglo) and taken companies from inception to development to acquisition in Chile, across border from Kachi.

Robert Trzebski
NON-EXEC DIRECTOR

International mining executive; 30 years experience; operational, commercial and technical experience in global mining incl. Argentina. Extensive global contacts to assist Lake with project development. Chief Operating Officer of Austmine Ltd. Director Austral Gold.

**Kachi Lithium brine Project.**
