21 October 2021

Presentation for Future Energy and Red Cloud Conferences 21 October

- Lake Resources invites investors to attend or listen to a replay of a virtual presentation in the Future Energy Conference, with guest speaker the Hon Angus Taylor MP, and the Red Cloud Oktoberfest

Clean lithium developer Lake Resources NL (ASX:LKE; OTC:LLKF) invites investors to listen live to a virtual presentation by Steve Promnitz, Managing Director, at the Future Energy Conference on Thursday 21 October at 10.50am local time (Sydney time), at which the guest speaker, The Hon Angus Taylor MP, will present at 12.30pm.

Investors can also listen to the replay of the presentations at Viriathus Capital’s Future Energy Conference and Red Cloud’s Oktoberfest. Please register for the Future Energy Conference using the QR code below. Red Cloud’s Oktoberfest Conference can be found by registering for the event at https://www.redclouddfs.com/oktoberfest2021/

Developed nations across the globe have established pacts and initiatives to move towards a zero-carbon future. The Future Energy Conference is a platform for those companies to present to the investors that are committing capital to the sector. The presentations provide an update on Lake delivering high quality, high margin solutions for the EV battery supply chain with scalable, premium lithium with superior ESG benefits by using clean direct lithium extraction.

About Lake Resources NL (ASX:LKE  OTC:LLKKF ) –
Clean high purity lithium using efficient disruptive clean technology - in demand by EV makers and lithium-ion batteries
Lake Resources NL (ASX:LKE, OTC: LLKKF) is a clean lithium developer utilising direct extraction technology for production of sustainable, high purity lithium from its flagship Kachi Project in Catamarca Province within the Lithium Triangle in Argentina among other projects covering 220,000 ha.

This direct extraction method delivers a solution for two rising demands of electric vehicle batteries – high purity battery materials to avoid performance issues, and more sustainable, responsibly sourced materials.

1. Clean-Tech: Efficient, disruptive, cost-competitive technology using well-known water treatment re-engineered for lithium (not mining). Technology partner, Lilac Solutions Inc, supported by Bill Gates led Breakthrough Energy fund and MIT’s The Engine fund.

3. Sustainable /ESG: Far smaller environmental footprint than conventional methods, that returns virtually all water (brine) to its source with a low CO2 footprint.

4. Prime Location, Large Projects: Flagship Kachi project in prime location among low-cost producers with a large lease holding (70,000 ha) and expandable resource (4.4 Mt LCE) of which only 20% is used for 25 years production at 25,500tpa (JORC Resource: Indicated 1.0Mt, inferred 3.4Mt, refer ASX announcement 27 November 2018). Pre-feasibility study by tier 1 engineering firm shows large, long-life low-cost operation with US$1.6 billion NPV pretax, and annual EBITDA of US$260 million from 2024 (refer ASX announcement 17 March 2021; 28 April 2020). (No changes to the assumptions in the resource statement or the PFS have occurred since the announcement date.)

An innovative direct extraction technique, based on a well-used ion exchange water treatment method, has been tested for over 18 months in partnership with Lilac Solutions, with a pilot plant module in California operating on Kachi brines and has shown 80-90% recoveries. Battery quality lithium carbonate (99.97% purity) has been produced from Kachi brine samples with very low impurities (refer ASX announcement 20 October 2020). The first samples of high purity (99.97% purity) battery quality lithium carbonate were tested in a NMC622 battery by Novonix with excellent results (2 March 2021).

This method of producing high purity lithium can revolutionise and disrupt the battery materials supply industry as it’s scalable, low cost, and delivers a consistent product quality.

Lake’s other projects include the Olaroz and Cauchari brine projects, located adjacent to major world class brine projects in production or construction, including Orocobre’s Olaroz lithium production and adjoins the impending production of Ganfeng Lithium/Lithium Americas’ Cauchari project. Lake’s Cauchari project has shown lithium brines over 506m interval with high grades averaging 493 mg/L lithium (117-460m) with up to 540 mg/L lithium. These results are similar to lithium brines in adjoining leases and infer an extension and continuity of these brines into Lake’s leases (refer ASX announcements 12 June 2019, 23 March 2021).
